WHAT IS

International Shipping Network (ishipnet)

International Shipping Network (iShipNet) is a GLOBAL UNIFIED MARITIME ECOSYSTEM where Professionals from ALL OVER the WORLD can "Share" their business inquiries (Chartering, S&P, Spare Parts, Chandling etc) to a continuously growing number of companies related to Shipping and get replies, in a very short time, from companies that will view the inquiry and are able to meet the demand, reducing the long lasting and costly daily searching for services or products in the global market.

The aim of this network is to offer the simplification of processes required in maritime related professions, through a wide range of built in tools, that were created according to maritime professional categories.

Furthermore iShipNet offers the environment, that allows Shipping related companies to know about the existence and create business connections with potential clients and providers, that was not easy to be accomplished otherwise. Of course all Shipping related companies have their own clientele and their network of providers. The Shipping Industry was not created yesterday! The platform though, remains a very useful tool. No matter what the clientele's size is or what contracts may exist with providers, the question remains...

"Can it be done better, faster and cheaper?"

Simplifying the process of approaching new markets, communicating directly with the potential customers or suppliers and integration of the global shipping market is no longer a scenario of science fiction. It is iShipNet.

The main object of shipping and the base point around which everything rotates, is the ship. So the "International Shipping Network" application is primarily addressed to all professionals who have a direct or indirect business relationship with ships.

BENEFITS

1. BUSINESS COMMUNICATION THAT ALLOWS THE DEVELOPMENT OF HUMAN RELATIONSHIPS

We have created our platform having in mind human relationships! For Maritime companies that target the global market, personal relations might become the way to success. iShipNet platform offers all the new technology features, that you have probably met on huge social networks (Sharing - Real time discussing etc), that has been proved that can bring people closer, even if the distance between them is huge.

2. REAL TIME INQUIRIES

Each company has the ability to share an inquiry, targeted to specific business categories or specific companies, and this inquiry will immediately appear on their timeline. We have created forms for the following types of inquiries so far, such as...

[SHIP SALE](#) || [PURCHASE INQUIRY](#) || [CHART VESSEL](#) || [CARGO OFFER](#) || [SPARE PARTS INQUIRY](#) || [SPARE PARTS OFFER](#)

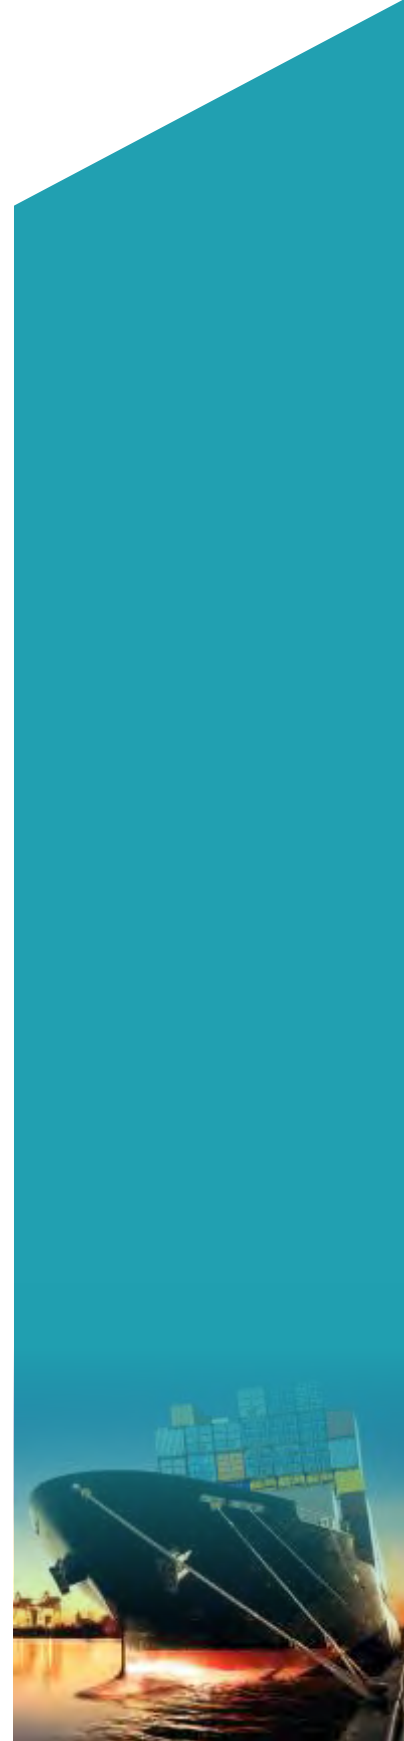

3. REAL TIME APPROXIMATION

As mentioned before on Real time inquiries, your posts show right away on your timeline. Here is your chance to be a part of the global market! Use the communication options offered on iShipNet platform to reply, send your offer, ask for more details or whatever you want. You are the one to decide who you will contact with. The days that you were waiting till someone reaches you, have passed.

4. NOTIFICATIONS

Even if you are not online when a new inquiry or offer is posted, do not worry! You will be notified by mail so that you will not miss it. The platform of iShipNet is here 24/7 for you!

5. MASTER AND SUB-ACCOUNTS

Ability of having Sub-Accounts under a main Master account for your company's departments. These Sub-Accounts are created on demand and work as normal accounts, with their own presence in iShipNet (but different username and Pass).

6. PRIVACY

All the actions that can take place on iShipNet platform, are governed by your privacy selections. You are always able to choose who you share your documents, posts, or files with, on a default for your account and / or on a "by post decision" basis. The "by post decision" privacy settings, temporarily (only for the certain post), bypass your default account's privacy settings.

7. STORING SPACE FOR EACH ACCOUNT

Option to store all documents or files that your company needs to have available, inside the private directories that you create. This way you will be able to have your documents available everywhere.
